

*Briggs & Stratton have been into motorsport for nearly as long as they've been building engines, but their passion for racing is a little-known secret.*

## key benefits

**Sponsor-ship** Potential for Briggs and Stratton to sponsor the TEKA series.

**Race Ready** The Animal is designed and built as a race engine.

**Support** Direct access to Briggs and Stratton technical personnel. Including support of the AKA.

**Pricing** Competitive engine prices when compared to current Honda engine costs.

**Power** The Animal outputs 8HP! Increased power means faster lap times.

## National Series?

For our series to move forward, we need the help and assistance of an engine manufacturer. This will open up the potential to start a truly National series.

## Help move the TEKA series forward

TEKA are currently running an experimental Briggs and Stratton Engine. You may have noticed the kart with CT plates running at Albury. Briggs and Stratton are planning to test a race built engine called "The Animal". You can look forward to seeing this 8 horsepower engine running at Round 4 Griffith. Once TEKA and Briggs and Stratton have worked out all the technical details, a

suitable power plant will be selected. All TEKA members will soon have the opportunity to vote on moving forward with Briggs and Stratton. No need to panic though, we expect Honda engines to be running for several years to come. If you have any questions, comments or wish to learn more please contact the committee.

**Help move the TEKA series forward.**
